Testovacie prúžky na meranie hladiny glukózy v krvi

Účel použitia: Testovacie prúžky CONTOUR PLUS sú určené na použitie s glukomeri radu CONTOUR PLUS na samostatné testovanie diabetikmi a na použitie zdravotníckym personálom pri testovaní v blízkosti pacienta na účely kvantitatívneho merania glukózy vo venóznej krvi a v čerstvej plnej kapilárnej krvi odobratej z brúška prsta. Prečítajte si používateľskú príručku ku glukomeru, kde nájdete pokyny na meranie z alternatívneho miesta na dlaní. Informácie o použití u novorodencov a arteriálnom použití nájdete v používateľskej príručke ku glukomeru.

Dodávaný materiál: Testovacie prúžky na meranie hladiny glukózy v krvi. **Potrebný materiál, ktorý nie je súčasťou dodávky:** Kompatibilný glukomer, lancety a odberové zariadenie.

Skladovanie a manipulácia

- Testovacie prúžky uchovávajte pri teplote od 0 °C do 30 °C.
- **Pokiaľ ide o testovacie prúžky vo fľaštičkách, testovacie prúžky skladujte iba v pôvodnej fľaštičke. Po vybratí testovacieho prúžku fľaštičku ihneď pevne uzatvorte.**
- **Pokiaľ ide o testovacie prúžky vo fóliových obaloch, fóliový obal s testovacím prúžkom skladujte v puzdre na prenášanie. Fóliový obal s testovacím prúžkom nechať zatvorený, až kým nebudete pripravený použiť testovací prúžok.** (Testovacie prúžky vo fóliovom obale nemusia byť dostupné v každej krajine.)

UPOZORNENIE: Testovacie prúžky nepoužívajte po uplynutí dátumu expirácie  Dátum expirácie je vytláčený na škatuli s testovacími prúžkami a na štítku na fľaštičke alebo na fóliovom obale s testovacími prúžkami.

- Ak glukomer a/alebo testovacie prúžky prenášate medzi miestnosťami s rôznymi teplotami, ponechajte ich 20 minút v kľude, aby sa prispôsobili novej teplote pred vykonaním testu merania hladiny glukózy v krvi. Rozsah prevádzkovej teploty testovacích prúžkov je od 5 °C do 45 °C pri relatívnej vlhkosti (RV) 10 % až 93 %. Najvhodnejší rozsah prevádzkových teplôt pre používaný glukomer nájdete v používateľskej príručke.
- Skontrolujte, či fľaštička alebo fóliové obaly s testovacími prúžkami neboli predtým otvorené. Pokiaľ ide o testovacie prúžky vo fóliových obaloch, fóliu neprepichujte ani netrhajte, kým nebudete pripravený použiť testovací prúžok. Výrobok skontrolujte, či niektoré časti nechýbajú, nie sú poškodené alebo rozbité. Ak potrebujete výmenu súčasti a pomoc, obráťte sa na zákaznícku podporu na číse +421 2 4552 6381.

 Testovacie prúžky sú určené len na jedno použitie. **Testovacie prúžky nepoužívajte opakovane.**

 Počet priložených testovacích prúžkov.

 **Postup pri meraní:** Pred testovaním si pozrite podrobné informácie o manipulácii s testovacími prúžkami, testovaní, meraní a obmedzenia v používateľskej príručke ku glukomeru a v ďalších pokynoch, ktoré sú v škatuľke od glukomeru. Najvhodnejšie prevádzkové podmienky pre používaný glukomer nájdete v používateľskej príručke.

Výsledky merania: Podrobné informácie o výsledkoch merania a údaje o klinickej výkonnosti súvisiace s vašim kompatibilným glukomerom nájdete v používateľskej príručke ku glukomeru. Glukomer je prednastavený tak, že výsledné hodnoty sú zobrazené v mmol/L (milimoly glukózy na liter) alebo mg/dL (miligramy glukózy na deciliter). Výsledky v mmol/L majú vždy desiatinnú čiarku (napr. 5,3 mmol/L), výsledky v mg/dL nebudú mať nikdy desiatinnú čiarku (napr. 96 mg/dL). Ak sa namerané hodnoty nezobrazujú v správnych jednotkách mmol/L alebo mg/dL, kontaktujte zákaznícku podporu na číse +421 2 4552 6381.

Zdravotnícky personál: Pokyny určené pre zdravotnícky personál nájdete v používateľskej príručke ku glukomeru.

Rozsahy cieľových hodnôt: Rozsahy cieľových hodnôt nájdete v používateľskej príručke ku glukomeru.

Otázne alebo rozporuplné výsledky: Informácie o riešení problémov nájdete v používateľskej príručke ku glukomeru. V prípade, že pri riešení problému neuspějete, obráťte sa na zákaznícku podporu na číse +421 2 4552 6381.

Kontrola kvality: Kontrolné meranie by ste mali vykonať, ak si myslíte, že by mohli byť testovacie prúžky poškodené, ak si myslíte, že glukomer nefunguje správne, alebo ak sa zopakovali neočakávané výsledky merania hladiny glukózy v krvi. Zdravotnícky personál musí dodržiavať požiadavky týkajúce sa testovania kontroly kvality zostavené v ich zdravotníckom zariadení. **Používajte iba kontrolné roztoky CONTOUR®PLUS (nie sú súčasťou dodávky).** Tieto kontrolné roztoky sú navrhnuté špeciálne na použitie so všetkými systémami CONTOUR®PLUS. Kontrolné výsledky sa musia pohybovať v rozsahoch kontroly vytláčených na každom fóliovom obale alebo fľaštičke s testovacími prúžkami. V prípade, že sa v uvedenom rozsahu nepohybujú, svoj glukomer nepoužívajte na meranie hladiny glukózy v krvi, kým tento problém nevyriešite.
